

# SXS Shredder Systems™

## Sophisticated-Xtra-Strong

The Shredder Company takes pleasure in introducing our SXS Shredder Systems™ which are both Sophisticated and Xtra Strong. The sophistication comes from our experience of building and operating shredders since 1960. We understand that to achieve the lowest total operating cost per ton through the life of the equipment, the shredder not only must be sophisticated and smart, but it must be built xtra strong.

Each department at The Shredder Company is under the direction of a manager with lots of real "Hands On" experience. We like to say that our equipment is sophisticated, meaning that the present equipment has gone through a long evolution. It is obvious that these designs are the result of a significant amount of intelligent observation and actual operating experience.

This means that the initial investment for our plant will not be the most expensive and it may not be the least expensive, but it will, throughout its life, deliver the lowest possible costs for each ton produced. Design decisions are made in keeping with the objective.

The Shredder Company's plant in El Paso is a very well staffed and very well equipped foundry and machine shop. This allows us to control the manufacture at every step and allows us to build the equipment without the excessive overheads associated with subcontracting significant amounts of the work required. We have one overhead and you have one source for responsibility.

**Give our company a call and let us show you the SXS difference.**
